Trigonometry

- 40 practice questions with explanations covering trigonometric ratios, identities, and applications

Graphs of Trigonometric Functions

You need to be able to recognise the graphs of $\sin\theta$, $\cos\theta$ and $\tan\theta$

You will have seen all these graphs on your GCSE

The key points to remember are the peaks/troughs of each, and the points of intersection

The Cos graph is the same as the Sin graph, but shifted along (it starts at 1 instead of 0)

The Tan graph has lines called asymptotes. These are points the graph approaches but never reaches (90° , 270° etc.)

Period (length of waves) = 360° for Sin and Cos, and 180° for Tan

INFERENCE

Inference is a cognitive process whereby we derive conclusions, assumptions, predictions, and explanations based on our interpretations of observable data.

OVERVIEW

The process of inferring something serves us well because it helps us make guesses and estimates, predict outcomes, and come to well-founded assumptions that can inform our decision-making. It enables us to make sense of the world around us based on a combination of observation and prior knowledge.

EXAMPLES

Sherlock Holmes draws conclusions from small observations in their surroundings. A speck of mud on a person's shoe, for example, could lead Holmes to infer the individual recently visited a specific location. There's room for error here, but Sherlock feels confident based on his prior experience and skillset.
