## Choosing the Right Aircraft

The first step in planning your Alaska flying adventure is choosing the right aircraft. There are a few things to consider when making your decision:

- **The type of terrain you'll be flying over.** Alaska has a wide variety of terrain, from mountains to glaciers to forests. You'll need to choose an

aircraft that is capable of handling the type of terrain you'll be flying over.

- **The number of people and amount of gear you'll be carrying.** If you're flying with a group of people or carrying a lot of gear, you'll need to choose an aircraft that is large enough to accommodate everyone and everything.
- **Your budget.** Aircraft rental rates can vary widely, so it's important to factor in your budget when choosing an aircraft.

Once you've considered these factors, you can start narrowing down your choices. Here are a few of the most popular aircraft for flying in Alaska:

- **Cessna 172.** The Cessna 172 is a popular choice for flying in Alaska because it is a versatile aircraft that can handle a variety of terrain. It is also relatively affordable to rent and operate.
- **Piper Cherokee.** The Piper Cherokee is another popular choice for flying in Alaska. It is a bit larger than the Cessna 172, so it can accommodate more people and gear. It is also a bit more expensive to rent and operate.
- **De Havilland Beaver.** The De Havilland Beaver is a classic bush plane that is well-suited for flying in Alaska. It is a rugged aircraft that can handle rough terrain and short runways. It is also more expensive to rent and operate than the Cessna 172 or Piper Cherokee.

## **Packing the Right Gear**

Once you've chosen your aircraft, it's time to start packing your gear. Here are a few essentials that you should bring on every flight:

- **Survival gear.** This includes a first-aid kit, a fire starter, a whistle, and a mirror. You should also bring a personal locator beacon (PLB) in case of an emergency.
- **Navigation equipment.** This includes a map, a compass, and a GPS. You should also bring a backup navigation system in case your primary system fails.
- **Communication equipment.** This includes a radio and a cell phone. You should also bring a backup communication system in case your primary system fails.
- **Food and water.** You should bring enough food and water to last you for at least three days. You should also bring a way to purify water in case you run out.
- **Clothing and shelter.** You should bring clothing that is appropriate for the weather conditions you'll be flying in. You should also bring a tent or other shelter in case you need to spend the night outdoors.

## Safety Tips

Flying in Alaska can be a safe and enjoyable experience, but it's important to take the proper safety precautions. Here are a few tips to help you stay safe:

- **File a flight plan.** Before you take off, be sure to file a flight plan with the nearest Flight Service Station (FSS). This will help search and rescue teams locate you in the event of an emergency.
- **Check the weather forecast.** Before you take off, be sure to check the weather forecast for your route. This will help you avoid flying into

dangerous weather conditions.

- **Be aware of your surroundings.** When you're flying in Alaska, it's important to be aware of your surroundings. This includes being aware of other aircraft, wildlife, and weather conditions.
- **Be prepared for an emergency.** In the event of an emergency, it's important to be prepared. This means having a survival kit, a personal locator beacon, and a backup navigation system.

Flying in Alaska can be a rewarding experience, but it's important to be prepared. By following the tips in this guide, you can help ensure that your flight is a safe and enjoyable one.
